Tutorial Objectives:

- to be able to identify system components
- to be able to describe a system in terms of these components

Tutorial Task 1 (to be completed in class):

1. General Introductions.
2. Form into a group of 3 to 4 students.
3. Your tutor will allocate a system to your group.
4. For your system:
   4.1 identify the elements which make it a system
   4.2 identify up to 10 inputs, processes and outputs of your system
   4.3 identify the type of system it is and discuss the reasons for your choices
   4.4 identify some data, and discuss how it is used to create information.
5. Present your system findings to the class as part of a class discussion.
