Tutorial 9 – Rich Picture Diagramming

Draw a Rich Picture Diagram of each the following situations. Include a legend to explain your symbols.

1. The provision of bus services to the Olympic athletes, coaching staff and officials from their village residences to training and competition venues, without disrupting scheduled bus services throughout Athens.

2. The situation of a MIMS student in week 11 of the semester, thinking about the impending exams.

3. The dilemma of an International Olympics Committee (IOC) official who, in the first round of testing, has discovered apparently positive test results from two Greek weightlifters competing in the Olympic games. The test used was a new test that has been approved by the IOC but is contested by several reputable University biochemistry laboratories. Two positive tests are required to confirm if a sample is showing evidence of banned drugs.
